

M.Sc., MATHEMATICS

Syllabus

Program Code: PMT

2021-2022 onwards

MANNAR THIRUMALAI NAICKER COLLEGE

(AUTONOMOUS)

Re-accredited with "A" Grade by NAAC

PASUMALAI, MADURAI – 625 004

Eligibility condition for admission

For admission to Post Graduate Programmers (P.G) a candidate should have passed the 3years degree course (under 10 + 2 + 3 pattern) (B.Sc Mathematics and B.Sc Mathematics with CA) recognized by the university as equivalent there to.

Duration

Two years. Each year consists of 2 semesters. The duration of a semester is 90 working days.

Attendance

75% of the classes in each semester shortage of attendance can be condoned as per existing university rules.

Evaluation procedure:

$$\text{A mark Statement with CGPA} = \frac{\sum(\text{Marks} \times \text{credits})}{\sum(\text{Credits})}$$

Where the summations are over all paper appeared up to the current semester.

Examinations: 3 hours duration. Total marks 100 for all papers

External Internal ratio 75:25 with 2 Internal tests.

Subjects of Study

The courses offered under the PG programs belong to the following categories:

1. Core Subjects
2. Electives
3. Non Major Electives (NME)

Pattern of the question paper for the Continuous Internal Assessment

Note: Duration – 1 hour 30 minutes

The components for continuous internal assessment are:

Part –A

Four multiple choice questions (answer all) 4 x 01= 04 Marks

Part –B

Three short answers questions (answer all) 3 x 02= 06 Marks

Part –C

Two questions (‘either or ‘type) 2 x 05=10 Marks

Part –D

Two questions out of three 2 x 10 =20 Marks

Total 40 Marks

The scheme of Examinations:

The components for continuous internal assessment are:

(40 Marks of two continuous internal assessments will be converted to 15 marks)

Two tests and their average --15 marks

Seminar /Group discussion --5 marks

Assignment --5 marks

Total 25 Marks

Pattern of the question paper for the Summative Examinations:**Note: Duration- 3 hours****Part –A**

Ten multiple choice questions 10 x01 = 10 Marks

No Unit shall be omitted: not more than two questions from each unit.)

Part –B

Short answer questions (one question from each unit) 5 x02 = 10 Marks

Part –C

Five Paragraph questions ('either or 'type) 5 x 05 = 25 Marks

(One question from each Unit)

Part –D

Three Essay questions out of five 3 x 10 =30 Marks

(One question from each Unit)

Total 75 Marks

Minimum Marks for a Pass

50% of the aggregate (Internal +Summative Examinations).

No separate pass minimum for the Internal Examinations.

34 marks out of 75 is the pass minimum for the Summative Examinations.

VISION

To empower the students so as to face the competitive world and make them fit for the MNCs according to their necessity and requirement

MISSION

- To maintain the standard of teaching in various areas of Pure and Applied Mathematics
- To provide an excellent learning environment with theoretical and practical knowledge where students can explore mathematical concepts.
- To mold the students to become a competent users of Mathematics and its applications.
- To instill the spirit of research through innovative teaching and research facilities.
- To qualify the students to meet the industry expectations.

The 12 Graduate Attributes*:

1. (KB) A knowledge base for engineering: Demonstrated competence in university level mathematics, natural sciences, engineering fundamentals, and specialized engineering knowledge appropriate to the program.
2. (PA) Problem analysis: An ability to use appropriate knowledge and skills to identify, formulate, analyze, and solve complex engineering problems in order to reach substantiated conclusions
3. (Inv.) Investigation: An ability to conduct investigations of complex problems by methods that include appropriate experiments, analysis and interpretation of data and synthesis of information in order to reach valid conclusions.
4. (Des.) Design: An ability to design solutions for complex, open-ended engineering problems and to design systems, components or processes that meet specified needs with appropriate attention to health and safety risks, applicable standards, and economic, environmental, cultural and societal considerations.
5. (Tools) Use of engineering tools: An ability to create, select, apply, adapt, and extend appropriate techniques, resources, and modern engineering tools to a range of engineering activities, from simple to complex, with an understanding of the associated limitations.
6. (Team) Individual and teamwork: An ability to work effectively as a member and leader in teams, preferably in a multi-disciplinary setting.
7. (Comm.) Communication skills: An ability to communicate complex engineering concepts within the profession and with society at large. Such ability includes reading, writing, speaking and listening, and the ability to comprehend and write effective reports and design documentation, and to give and effectively respond to clear instructions.

8. (Prof.) Professionalism: An understanding of the roles and responsibilities of the professional engineer in society, especially the primary role of protection of the public and the public interest.
9. (Impacts) Impact of engineering on society and the environment: An ability to analyze social and environmental aspects of engineering activities. Such ability includes an understanding of the interactions that engineering has with the economic, social, health, safety, legal, and cultural aspects of society, the uncertainties in the prediction of such interactions; and the concepts of sustainable design and development and environmental stewardship.
10. (Ethics) Ethics and equity: An ability to apply professional ethics, accountability, and equity.
11. (Econ.) Economics and project management: An ability to appropriately incorporate economics and business practices including project, risk, and change management into the practice of engineering and to understand their limitations.
12. (LL) Life-long learning: An ability to identify and to address their own educational needs in a changing world in ways sufficient to maintain their competence and to allow them to contribute to the advancement of knowledge

WA	Graduate Attributes	Caption as
1	Demonstrated competence in university level mathematics, natural sciences, engineering fundamentals, and specialized engineering knowledge appropriate to the program.	A knowledge base for engineering
2	An ability to use appropriate knowledge and skills to identify, formulate, analyze, and solve complex engineering problems in order to reach substantiated conclusions	Problem analysis
3	An ability to conduct investigations of complex problems by methods that include appropriate experiments, analysis and interpretation of data and synthesis of information in order to reach valid conclusions.	Investigation
7	An ability to communicate complex engineering concepts within the profession and with society at large. Such ability includes reading, writing, speaking and listening, and the ability to comprehend and write effective reports and design documentation, and to give and effectively respond to clear instructions.	Communication skills
6	An ability to work effectively as a member and leader in teams, preferably in a multi-disciplinary setting.	Individual and teamwork
10	An ability to apply professional ethics, accountability, and equity.	Ethics and equity
12	An ability to identify and to address their own educational needs in a changing world in ways sufficient to maintain their competence and to allow them to contribute to the advancement of knowledge	Life-long learning

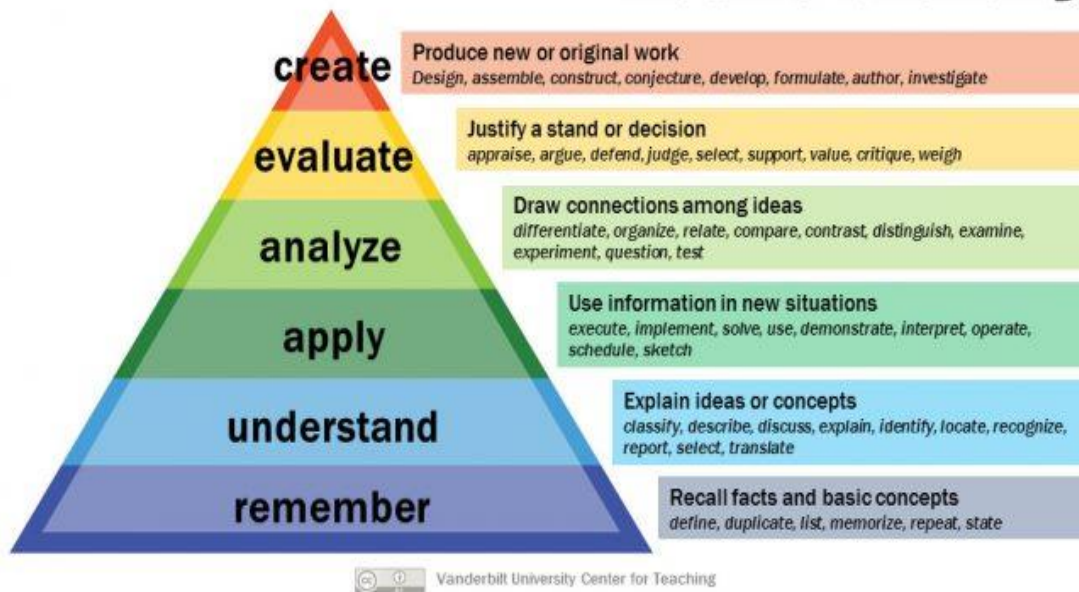

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)	
PEO1:	Enhance the entrepreneurial abilities, life skills and research initiates through experiential learning practices and building self confidence
PEO2:	Collaborate with industry and alumnae to explore the new avenues in respective domains and raise the employability ratio
PEO3:	Equip with soft skills and critical thinking to produce an erudite and trustworthy generation to fit into versatile situations
PEO4:	Adhere to the ethical and environmental sustainability to create morally upright and empowered citizens to face industry/ Institution
PEO5:	Up-skill / Re-skill their primary knowledge and potentials to compete in the dynamic global environment.
PEO6:	To build confidence to appear for Competitive / Civil Service examinations and to conquer commanding positions in organizational level.

PO NO	PROGRAMME OUTCOMES (POs)	
At the end of the programme, the students will be able to		
PO – 1	Demonstrate the knowledge and understanding of Science concepts and its relevant fields.	Disciplinary Knowledge
PO – 2	Identify, formulate, analyse complex problems and reach valid conclusions using the methodologies of Science.	Problem Solving
PO – 3	Employ critical and analytical thinking in understanding the concepts and apply them in various problems appearing in different branches of Science.	Analytical Reasoning & Critical Thinking
PO - 4	Communicate the known concepts effectively within the profession and with any forum	Communication Skills
PO - 5	Function successfully as a member/leader in any team and to apply ethics, accountability and equity in their life.	Team Work and Moral/Ethical Awareness
PO - 6	Use ICT tools in various learning situations, related information sources, suitable software to analyze data and furthermore participating in learning activities throughout life to meet the demands of work place through knowledge /up-skilling / re-skilling	Digital Literacy & Life-long Learning

PROGRAM SPECIFIC OUTCOME (PSOs)

PSO1:	Demonstrate the understanding of mathematical concepts in the field of Science and Technology.
PSO2:	Express their mathematical knowledge with others effectively in both oral and written form in an organized manner.
PSO3:	Proficient in using digital learning platforms and update their knowledge, skills to fulfill the requirements at the workplace in their life span.
PSO4:	Employ critical and analytical thinking in understanding the concepts of Mathematical Science and in appearing Competitive examinations SET/ NET/ TET.
PSO5:	Choose appropriate mathematical and computational methods in order to solve different types of problems and work efficiently as a team member / leader..
PSO6:	Work independently and do detailed study of various concepts of Science. Plan, execute, report the results of an experiment/investigation with the highest standard of ethics in research

Bloom's Taxonomy

MANNAR THIRUMALAI NAICKER COLLEGE (Autonomous), Pasumalai

FIRST SEMESTER

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	ALGEBRA			
Course Code	21PMTTC11	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP
Course Objectives:				
<ul style="list-style-type: none"> • To introduce the advanced ideas in Group theory. • To familiarize Abelian groups and Ring theory. • To know about unique factorization domain. • To equip the students in fields and ideals. • To know about Euclidean rings, Polynomial rings. 				
Unit: I				18
Groups (Definitions only) – Subgroups - A Counting Principle - Normal subgroups and Quotient groups - Permutation groups.				
Unit: II				18
Another Counting Principle -Sylow's Theorems - Direct Products –Finite Abelian Groups				
Unit: III				18
Ideals and Quotient Rings - More Ideals and Quotient Rings, The Field of Quotients of an Integral Domain				
Unit: IV				18
Euclidean Rings - A particular Euclidean Rings.				
Unit: V				18
Polynomial rings - Polynomials over the rational field - Polynomial rings over Commutative rings.				
Total Lecture Hours				90
Books for Study: I. N. Herstein, Topics in Algebra , Second Edition, John Wiley and Sons, New Delhi, Reprint 2010.				
Unit I - Chapter 2: Sections 2.1, 2.4, 2.5, 2.6, 2.10 Unit II - Chapter 2: Sections 2.11, 2.12, 2.13, 2.14 Unit III- Chapter 3: Sections 3.4, 3.5, 3.6, Unit IV - Chapter 3: Sections 3.7, 3.8 Unit V - Chapter 3: Sections 3.9,3.10,3.11.				
Books for References:				
1. Joseph A Gallian, <i>Contemporary Abstract Algebra</i> , 8 th Edition, Cengage Learning India Private Limited, New Delhi, 2013.				
2. Thomas W.Hungerford, Algebra , Springer International Edition, Newyork, 2009.				
3. Lang Serge , Algebra , Addison – Welsey,2002

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Demonstrate the understanding of group, normal groups, quotient group and permutation groups.	K2
CO2:	Use Sylow's theorem in algebraic structures	K4
CO3:	Examine ideals, quotient rings and integral domain	K3
CO4:	Analyse Euclidean ring	K5
CO5:	Classify the irreducibility of polynomials, rings over field	K4

CO & PO Mappings:

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	ORDINARY DIFFERENTIAL EQUATIONS				
Course Code	21PMTTC13	L	P	C	
Category	Core	6	-	4	
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP	
COURSE OBJECTIVES:					
<ul style="list-style-type: none"> • To produce knowledge on ODEs. • To familiarize with power series solution, special functions. • To learn about existence and uniqueness of solutions. • To solve homogenous and non-homogenous equations. • To solve standard type of OD equations. 					
Unit: I					18
Second order homogeneous equation, Initial Value Problem, Linear Dependence and Independence, A formula for Wronskian, Non-homogeneous equation of order two.					
Unit: II					18
Homogeneous equation of order n, Initial value problems, Annihilator method to solve non-homogeneous equation, algebra of constant coefficient operators.					
Unit: III					18
Initial value problem for the homogeneous equation, Solution of the Homogeneous equation, the Wronskian and linear independence, Reduction of the order of a homogeneous equation, The non-homogeneous equation, Homogeneous equation with analytic coefficients, The Legendre equation.					
Unit: IV					18
The Euler equation, Second order equation with Regular Singular points – an example, Second order equation with Regular Singular points – the general case, A convergence proof, The exceptional cases, The Bessel equation, The Bessel equation (continued) .					
Unit: V					18
Equation with Variable Separated, Exact equation, The method of Successive Approximations, The Lipschitz Condition, Convergence of the Successive Approximation, Non local existence of solution, Approximation to and uniqueness of solutions.					
Total Lecture Hours					90
Books for Study:					
E.A.Coddington, An Introduction to Ordinary Differential Equation , PHI Learning Private Limited, New Delhi, 2010. Unit I - Chapter 2 : Section 1 to 6 Unit II - Chapter 2 : Section 7 to 12 Unit III - Chapter 3: Section 1 to 8 Unit IV - Chapter 4: Section 1 to 8 Unit V - Chapter 5: Section 1 to 8

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Analyze the existence and uniqueness of solutions of ordinary differential equations	K4
CO2:	Solve homogenous equation and non-homogenous equation with constant co-efficient	K3
CO3:	Develop the concepts of ordinary differential equation for homogeneous and non-homogenous equations.	K3
CO4:	Demonstrate the understanding of power series and special functions	K2
CO5:	Compute the solution by iterative procedure for exact equation.	K3

 (For those who joined in 2021-2022 and after)

Course Name	GRAPH THEORY AND ITS ALGORITHMS			
Course Code	21PMTC14	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP
Course objectives:				
<ul style="list-style-type: none"> • To understand the fundamental concepts in graph theory. • To apply graph theory in different fields • To improve the different types of proof writing skills. • To learn to model problems using graphs • To solve the problems algorithmically. 				
Unit: I				18
The Incidence and Adjacency Matrices, Sub graphs, Vertex degrees, Paths and Connection, Cycles, Sperner's lemma, Trees, Cut edges and Bonds, Cut vertices				
Unit: II				18
Euler tours, Hamiltonian cycles, The travelling salesman problem, Matchings, Matchings and Coverings in Bipartite graphs				
Unit: III				18
Edge Chromatic Number, Vizing's Theorem, Chromatic number, Brook's theorem.				
Unit: IV				18
Plane and Planar graphs, Dual Graphs ,Euler's formula ,Bridges ,Kuratowski's Theorem, Directed Graphs, Directed Paths, Directed Cycles, Flows, Cuts, The Max-Flow Min –Cut theorem.				
Unit: V				18
Algorithms : connectedness and components – spanning tree – cut vertices and separability – directed circuits – shortest path algorithm – planarity testing – isomorphism				
Total Lecture Hours				90
Books for Study:				
1. J.A.Bondy and U.S.R.Murty, Graph Theory with Applications. North Holland Publications, New york, 1976.				
Unit I - Chapter 1 : Section 1.3 to 1.7 and 1.9				
Chapter 2: Section 2.1 to 2.3				
Unit II – Chapter 4: Section 4.1, 4.2 and 4.4				
Chapter 5: Section 5.1 to 5.2				
Unit III - Chapter 6 : Section 6.1, 6.2				
Chapter 8 : Section 8.1, 8.2				
Unit IV - Chapter 9 : Section 9.1 to 9.5				
Chapter 10 : Section 10.1 to 10.3				
2. Narsingh Deo: Graph Theory with Applications to Engineering and Computer Science, Prentice Hall, 1979.				
Unit V - Chapter 11 : Section 11.4 to 11.7

Course Outcomes

K Level

On the successful completion of the course , the students will be able to

CO1:	Understand the definition of different types of graphs and Sperner’s lemma.	K2
CO2:	Make use of graph theory concepts in travelling salesman problem, Matching and covering.	K3
CO3:	Categorize chromatic number, edge chromatic number with theorems.	K4
CO4:	Develop the different types of proof writing skills for planar graphs and directed graphs	K5
CO5:	Apply various types of algorithms in graph.	K3

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	CLASSICAL MECHANICS			
Course Code	21PMTTC15	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP
Course objectives:				
<ul style="list-style-type: none"> ❖ To recall the basic concepts of motion of a particle. ❖ To understand D' Alembert's Principle and Lagrangian's Formulation. ❖ To derive the Lagrange's Equations from Hamilton's Principle. ❖ To apply the concept of the Equations of Motion and the Equivalent one-dimensional Problems. ❖ To understand the Kepler's law and Inverse-Square Law of Force. 				
Unit: I				18
Mechanics of a Particle, Mechanics of a System of Particles, Constraints.				
Unit: II				18
D'Alembert 's principle and Lagrange's equations, Velocity – dependent potentials and the dissipation function, Hamilton's principle, Some techniques of the calculus of variations.				
Unit: III				18
Derivation of Lagrange's equations from Hamilton's principle, Extension of Hamilton's principle to non-holonomic systems, Advantages of a variational principle formulation, Conservation theorems and Symmetry properties.				
Unit: IV				18
Reduction to the equivalent one – body problem. The equations of motion and first integrals, The equivalent one –dimensional problem and Classification of orbits, The virial theorem				
Unit: V				18
The Differential equation for the orbit and integrable power – law potentials, Conditions for closed orbits (Bertrand's theorem), The Kepler problem : Inverse square law of force, The motion in time in the Kepler problem, The Laplace – Runge- Lenz vector.				
Total Lecture Hours				90
Books for Study:				
H.Goldstein, Classical Mechanics , Second Edition, Addison Wesley, Newyork, 1980.				
Unit I	-	Chapter 1 : Section 1.1 to 1.3

*3 – Advanced Application; 2 – Intermediate Development; 1 - Introductory Level

LESSON PLAN

UNIT	COURSE NAME	Hours	Pedagogy
I	Mechanics of a Particle, Mechanics of a System of Particles, Constraints.	18	Chalk & Talk
II	D'Alembert 's principle and Lagrange's equations, Velocity – dependent potentials and the dissipation function, Hamilton's principle, Some techniques of the calculus of variations	18	Chalk & Talk
III	Derivation of Lagrange's equations from Hamilton's principle, Extension of Hamilton's principle to non-holonomic systems, Advantages of a variational principle formulation, Conservation theorems and Symmetry properties.	18	Chalk & Talk
IV	Reduction to the equivalent one – body problem. The equations of motion and first integrals, The equivalent one –dimensional problem and classification of orbits, The virial theorem	18	Chalk & Talk
V	The differential equation for the orbit and integrable power – law potentials, Conditions for closed orbits (Bertrand's theorem), The Kepler problem : Inverse square law of force, The motion in time in the Kepler problem, The Laplace – Runge- Lenz vector.	18	Chalk & Talk

Course Designed by: **Dr.S.Andal** and **Dr.R.Bhavani**

SECOND SEMESTER

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	ADVANCED ALGEBRA			
Course Code	21PMTTC21	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP
Course objectives:				
<ul style="list-style-type: none"> • To familiarize various methods on solving algebraic equations. • To introduce Schwarz's inequality. • To explain about various transformations. • To study about determinants. • To explain canonical and triangular forms. 				
Unit: I				18
Elementary Basic Concepts - Dual Spaces – Inner Product Spaces.				
Unit: II				18
The Algebra of linear transformations, Characteristic roots				
Unit: III				18
Canonical forms, Triangular form, Nilpotent transformations				
Unit: IV				18
Trace and Transpose, Determinants.				
Unit: V				18
Hermitian, Unitary and Normal transformations				
Total Lecture Hours				90
Books for Study:				
I. N.Herstein, Topics in Algebra , Second Edition, John Wiley and Sons, New Delhi, Reprint 2010.				
Unit I - Chapter 4: Section 4.1, 4.3 ,4.4.				
Unit II - Chapter 6: Section 6.1 and 6.2				
Unit III - Chapter 6: Sections 6.4 and 6.5				
Unit IV - Chapter 6 : Section 6.8 and 6.9				
Unit V - Chapter 6: Section 6.10				
Books for References:				
1. Thomas W.Hungerford, Algebra , Spinger International Edition, Newyork, 2009.				
2. M.L. Khanna, Linear Algebra , Jai PrakashNath Publications, Meerut, 1984.				
3. Martin Isaacs , Algebra , Library of Congress Cataloging-in-Publication Data, Edition, New Delhi, 2009.

https://www.youtube.com/watch?v=cDCFS68W7ZA				

Course outcomes:		K Level
On the successful completion of the course , the students will be able to		
CO1:	Explain the properties of Inner Product Spaces.	K2
CO2:	Use linear transformation for characteristic roots and vectors	K3
CO3:	Represent Canonical forms, Triangular form, Nilpotent transformations	K2
CO4:	Determine the Trace and transpose, determinants	K3
CO5:	Evaluate the normal transformation	K5

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	PARTIAL DIFFERENTIAL EQUATIONS			
Course Code	21PMTC22	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP
Course objectives:				
<ul style="list-style-type: none"> • To study about linear classifications of partial differential equations. • To solve different types of PDEs using various methods. • To classify second order PDEs. • To derive one dimensional wave and heat conduction equations. • To solve Dirichlet's and Neumann's Problem in various domain. 				
Unit: I				18
P.D.E –Curves and Surfaces – Genesis of First Order P.D.E – Classification of Integrals – Linear Equation of the first Order – Partial Differential Equation –Compatible Systems – Charpit's Method – Jacobi's Method.				
Unit: II				18
Integral Surfaces Through a Given Curve –Quasi-Linear Equation –Non- Linear First Order P.D.E.				
Unit: III				18
Second Order P.D.E.: Genesis of Second Order P.D.E – Classification of Second Order P.D.E - One- Dimensional Wave Equation – Vibration of an Infinite String –Vibration of a Semi – infinite String – Vibration of a String of Finite Length (Method of Separation of Variables).				
Unit: IV				18
Laplace's Equation Boundary Value Problems- Maximum and Minimum Principle- The Cauchy Problem – The Dirichlet Problem for the Upper Half Plane – The Neumann Problem for the Upper Half Plane – The Dirichlet Interior Problem for a Circle – The Dirichlet Exterior Problem for a Circle – The Neumann Problem for Circle – The Dirichlet Problem for a Rectangle – Harnack's Theorem.				
Unit: V				18
Green's function, Heat Conduction Problem – Heat Conduction –Infinite Rod Case- Heat Conduction Finite Rod Case – Duhamel's Principle – Wave Equation –Heat Conduction Equation				
Total Lecture Hours				90
Books for Study:				
T.Amarnath, An Elementary Course in Partial Differential Equation , Narosa Publishing Company, Chennai, 1997.				
Unit I - Chapter 1 : Section 1.1 to 1.8 Unit II - Chapter 1 : Section 1.9 to 1.11				
Unit III - Chapter 2 : Section 2.1 to 2.3 (2.3.1 to 2.3.3and 2.3.5)				
Unit IV - Chapter 2 : Section 2.4.1 to 2.4.10				
Unit V - Chapter 2 : Section 2.4 (2.4.11 to 2.4.13)				
Section 2.5 (2.5.1and 2.5.2)				
Section 2.6 (2.6.1and 2.6.2)				
Books for References:				
1. E.T. Copson, Partial differential equations , S. Chand and Company Ltd., New Delhi, 1984.				
2. Jeffrey Raich, Partial differential equations , Springer Publisher, Newyork, 1991.				
3. Ian Sneddon, Elements of Partial Differential Equations , Mc Graw-Hill Book Company,				

New Delhi, 1985.

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Solve the Linear first order partial differential equations using various methods.	K3
CO2:	Analyze the Semi-linear, Quasi-linear & Non-linear first order partial differential equations.	K4
CO3:	Classify the second order partial differential equations	K4
CO4:	Apply the concepts of partial differential equations in solving boundary value problems.	K3
CO5:	Determine the solutions for homogeneous and non-homogeneous partial differential equations.	K3

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	NUMERICAL ANALYSIS			
Course Code	21PMTTC23	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY ✓	SKILL ORIENTED	ENTREPRENEURSHIP	
Course Objectives:				
<ul style="list-style-type: none"> • To develop Numerical computational skills. • To practice Numerical computational applications. • To introduce difference equations and recurrence equations. • To demonstrate understanding and implementation of numerical solution of algorithms based for employability • To find the errors in the approximation 				
Unit: I				18
Bisection method – Iteration method (approximation method) based on first degree equation, second degree equation, General Iteration Methods .				
Unit: II				18
Direct methods: forward substitution method, back substitution method, Cramer rule, Gauss elimination method, Gauss Jordan method – triangulation method – LU decomposition– Cholesky method – Partition method.				
Unit: III				18
Iterative methods - Jacobi iteration methods, Gauss-Seidel iteration methods, Similarity transformation – Eigen values – Eigen vectors –Jacobi method for symmetric matrices.				
Unit: IV				18
Lagrange’s and Newton Interpolation, Finite Difference Operators, Interpolating Polynomials using Finite Differences, Hermite Interpolation.				
Unit: V				18
Numerical Differentiation, Partial Differentiation, Numerical Integration, Methods based on Interpolation, Composite Integration methods.				
Total Lecture Hours				90
Books for Study:				
M.K.Jain, S.R.K.Iyengar, R.K.Jain, Numerical Methods for scientific and Engineering computation – 4th edition, New age international Pvt limited, New Delhi, 2009.				
Unit I - Chapter 2 : Section 2.1-2.4 and 2.6 Unit II - Chapter 3 : Section 3.1, 3.2 Unit III - Chapter 3 : Section 3.4, 3.5 and 3.7 Unit IV - Chapter 4 : Section 4.1 – 4.5 Unit V - Chapter 5 : Section 5.1, 5.2, 5.5 - 5.7, 5.9.				
Books for References:				
1. G.Shankar Rao, Numerical Analysis , New Age International publishers, New Delhi,1997. 2. Rainer Kress, Numerical Analysis , Springer international Edition, New Delhi, 2010. 3. S.R.K.Iyengar ,R.K.Jain , Numerical Methods , , New age international Pvt limited, New Delhi, 2008

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Demonstrate the understanding of direct methods and iterative methods for equations	K2
CO2:	Apply proper methods for solving transcendental, algebraic and system of equations	K3
CO3:	Evaluate interpolation and extrapolation using tabular values	K5
CO4:	Associate tabular values with integration and differentiation	K2
CO5:	Use iterative methods for PDE	K3

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	FUZZY ALGEBRA AND ITS APPLICATIONS				
Course Code	21PMTTC24	L	P	C	
Category	Core	6	-	4	
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP	
Course Objectives:					
<ul style="list-style-type: none"> • To familiarize the concept of crisp set and its properties • To learn the basics of fuzzy sets and its operations • To differentiate crisp logic, multi-valued logic and fuzzy logic • To use inference theory in fuzzy logic • To learn the application in real life 					
Unit: I					18
Fuzzy sets: Basic types– Basic concepts – Additional properties of α – cuts – Representation of fuzzy sets – Extension principle for fuzzy sets – Types of operations – Fuzzy complements					
Unit: II					18
Fuzzy numbers – Linguistic variables – Arithmetic operation on intervals – Arithmetic operation on fuzzy numbers					
Unit: III					18
Fuzzy relation : Crisp versus Fuzzy relation – projection and cylindric extensions- Binary fuzzy relation on a single set – fuzzy equivalence relations – Fuzzy compatibility relation					
Unit: IV					18
Fuzzy logic: Classical logic – An over view – multi valued logic – Fuzzy propositions –Fuzzy quantifiers – Linguistic hedges – Inference from conditional fuzzy propositions – Inference from conditional and quantified propositions – Inference from quantified propositions					
Unit: V					18
Applications : Applications to Civil Engineering –Computer Engineering – Reliability theory – Robotics – Medicine – Economics.					
Total Lecture Hours					90
Books for Study:					
George J Klir and B.Yuan, Fuzzy sets and Fuzzy logic – Theory and application , Second edition, Prentice Hall, New Delhi,1995.					
Unit I - Chapter 1 : Sections 1.2 to 1.4 Chapter 2 : Sections 2.1 to 2.3 Chapter 3 : Sections 3.1,3.2					
Unit II - Chapter 4 : Section 4.1 to 4.4					
Unit III - Chapter 5 : Sections 5.1 to 5.6					
Unit IV - Chapter 8 : Sections 8.2 to 8.8					
Unit V - Chapter 16 : Sections 16.1 , 16.2, 16.5 to 16.7, Chapter 17 : Sections 17.1 to 17.3.					
Books for References:					
1. H.J.Zimmermann, Fuzzy Set Theory and its Applications , Fourth Edition, Springer Publishers, New Delhi, 2006.					

2. Timothy J. Ross, “**Fuzzy Logic with Engineering Applications**”, 3rd Edition, Willey, 2010.

COURSE OUTCOMES

K Level

On the successful completion of the course , the students will be able to

CO1:	Interpret fuzzy set theory, representation, operation and extension principle	K2
CO2:	Identify fuzzy numbers and its linguistic variables	K2
CO3:	Validate fuzzy relation, projections and its equivalence.	K5
CO4:	Analyse multi valued logic and fuzzy logic with inference theory	K3
CO5:	Apply fuzziness in real valued problems	K3

THIRD SEMESTER

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	FIELD THEORY AND LATTICES				
Course Code	21PMTTC31	L	P	C	
Category	Core	6	-	4	
Nature of course:	EMPLOYABILITY	✓	SKILL ORIENTED	ENTREPRENEURSHIP	
Course Objectives:					
<ul style="list-style-type: none"> • To make the students familiar with the concepts of Galois theory • To introduce application of Galois theory in solvability by radicals • To study about lattices and its special types • To make the students understand the aspects of field theory • To familiarize finite field theory 					
Unit: I					18
Fields, Extension fields, Roots of polynomials					
Unit: II					18
More about roots, The elements of Galois theory.					
Unit: III					18
Solvability by Radicals, Galois groups over the rationals					
Unit: IV					18
Finite fields, Wedderburn's Theorem on finite division rings					
Unit: V					18
Lattices: Lattices and posets, lattices as posets. Sub lattices; direct products, distributive lattices, modular and geometric lattices, Boolean lattices.					
Total Lecture Hours					00 Hrs
Books for Study:					
1) Herstein.I.N, Topics in Algebra , Second Edition, John Wiley and Sons, 1999, New Delhi. 2) GarrotBirkoff and Thomas Bartee, Modern Applied Algebra , CBC Publishers and Distributors, 1999, NewDelhi. Unit I- Text Book 1 : Chapter 5 : Sections 5.1,5.3 Unit II -Text Book 1 : Chapter 5 : Sections 5.5,5.6 Unit III - Text Book 1 : Chapter 5 : Sections 5.7,5.8 Unit IV - Text Book 1 : Chapter 7 : Sections 7.1,7.2 Unit V- Text Book 2 : Chapter 9 : Sections 9.1 to 9.7					
Books for References:					
1. Vijay K.Khanna, " Lattices and Boolean Algebras ", Second Edition, Vikas Publishing House Pvt. Ltd,2008. 2. John B.Fraleigh, " A First Course in Abstract Algebra ", Third Edition, Narosa Publishers, 2003, New Delhi. 3. Course Outcomes		K Level
On the successful completion of the course , the students will be able to		
CO1:	Explain the notion of field theory.	K4
CO2:	Analyze the relationship between the ring, field and Galois theory.	K4
CO3:	Develop the proof of solvable group for radicals.	K3
CO4:	Explain the finite division rings	K4
CO5:	Classify the different types of lattices	K4

CO & PO Mappings:

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	COMPLEX ANALYSIS			
Course Code	21PMTTC32	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To understand the concept of analyticity, line integrals, residues. • To familiarize Cauchy integral formula. • To introduce Taylor and Laurent Series. • To introduce analytic function, complex integration and Riemann Zeta Function. • To estimate integrals of special forms in certain regions. 				
Unit: I				18
Introduction to the concept of Analytic Function –Elementary theory of Power Series.				
Unit: II				18
The Exponential and Trigonometric Function – Conformality – Linear Transformation				
Unit: III				18
Fundamental Theorems – Cauchy’s Integral Formula – Local properties of Analytical Function.				
Unit: IV				18
The General form of Cauchy’s Theorem – The Calculus of Residues- Harmonic Functions.				
Unit: V				18
Power Series Expansions – Partial Fractions and Factorization - Entire Functions – The Riemann Zeta Function.				
Total Lecture Hours				90
Books for Study:				
Ahlfors, L.V., “Complex Analysis”, Third Edition, McGraw Hill International Company, 1979, New Delhi.				
Unit I : Chapter 2 : Section 1 and 2 (2.4 & 2.5)				
Unit II : Chapter 2 : Section 3				
Chapter 3 : Section 2 and 3 (3.1 to 3.3)				
Unit III: Chapter 4 : Section 1,2,3				
Unit IV: Chapter 4 : Section 4 (4.1 to 4.5) , Section 5 & Section 6				
Unit V:Chapter 5: Section 1,2(2.1 & 2.2) and Section 3 & 4.

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	OPERATIONS RESEARCH			
Course Code	21PMTE31	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To familiarize various decision– making tools. • To solve optimization problems. • To introduce the application on inventory control system and etc. • To identify the resources required for a project and generate a plan and work schedule. • To learn about queuing models 				
Unit: I				18
Network definitions- Minimal Spanning Tree Algorithm-Shortest route problem-Maximal Flow Model - CPM and PERT.				
Unit: II				18
Recursive nature of computations in DP - Forward and Backward recursion - Selected DP applications. General inventory models – Static Economic Order Quantity(EOQ) models				
Unit: III				18
Decision making under certainty-Analytic Hierarchy Process(AHP)-Decision making under risk- Decision under uncertainty-Game theory.				
Unit: IV				18
Queuing systems – Elements of Queuing model – Role of Exponential Distribution – Pure Birth and Death Models – Generalized Poisson Queuing Models – Specialized Poisson Queues.				
Unit: V				18
Unconstrained Problems – Necessary and Sufficient Conditions- Newton – Raphson Method - Constrained Problems – Equality Constraints- Inequality Constraints- Karush-Kuhn-Tucker Conditions				
Total Lecture Hours				90
Books for Study:				
Hamdy A. Taha, Operations Research – An introduction, 8 th Edition, PHI, New Delhi.				
Unit I- Chapter 6: sections 6.1 to6.5				
Unit II - Chapter 10: sections 10.1 to10.3 Chapter 11:sections 11.1 to 11.3				
Unit III - Chapter 13:sections 13.1 to 13.4				
Unit IV - Chapter 15:sections 15.1 to 15.6				
Unit V - Chapter 18: sections 18.1 to18.2				
Books for References:				
1. KantiSwarup , P.K. Gupta and Man Mohan, “ Operations Research ” , Sultan Chand & sons Publications, Reprint 2006, NewDelhi.				

2. Harvey M. Wagner, “Principles of Operations Research”, Second Edition, Prentice Hall of Pvt Ltd, 1998, NewDelhi.

3. Prem Kumar Gupta and D.S.Hira, “Operations Research”, S.Chand Publications, 2009, New Delhi.

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Identify various decision– making tools.	K3
CO2:	Analyze various models in inventory system.	K4
CO3:	Apply suitable method in game theory.	K3
CO4:	Explain Poisson Queuing Models	K4
CO5:	Classify the constrained and unconstrained Problems	K4

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	NONLINEAR DIFFERENTIAL EQUATIONS			
Course Code	21PMTE32	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To form First order Systems in Two Variables and Linearization • To learn Averaging Methods • To understand Perturbation Methods • To solve Linear Systems • To find the Stability of systems. 				
Unit: I				18
The general phase plane – Some population models – Linear approximation at equilibrium points – Linear systems in matrix form.				
Unit: II				18
An energy balance method for limit cycles – Amplitude and frequency estimates – Slowly varying amplitudes; Nearly periodic solutions - Periodic solutions: Harmonic balance – Equivalent linear equation by harmonic balance – Accuracy of a period estimate.				
Unit: III				18
Outline of the direct method – Forced oscillations far from resonance Forced oscillations near resonance with weak excitation – Amplitude equation for undamped pendulum – Amplitude perturbation for the pendulum equation – Lindstedt’s method- Forced oscillation of a self – excited equation – The Perturbation method and Fourier series.				
Unit: IV				18
Structure of solutions of the general linear system – Constant coefficient system – Periodic coefficients – Floquet theory – Wronskian.				
Unit: V				18
Poincare stability – Solutions, paths and norms – Liapunov stability- Stability of linear systems – Comparison theorem for the zero solutions of nearly-linear systems				
Total Lecture Hours				90
Books for Study:				
“Nonlinear Ordinary Differential Equations” by D.W. Jordan and P. Smith, Clarendon Press, Oxford, 1977.				
Unit-I: Chapter 2;				
Unit-II :Chapter 4;				
Unit-III: Chapter 5: Sections: 5.1 - 5.4, 5.7 -5.10.				
Unit-IV: Chapter 8: Sections: 8.1 - 8.4;				
Unit-V: Chapter 9: Sections: 9.1 - 9.4, 9.6.				
Books for References:				
1 “Differential Equations” by G.F. Simmons, Tata McGraw-Hill, New Delhi, 1979.				
2 “Ordinary Differential Equations and Stability Theory” by D.A. Sanchez, Dover, New York, 1968.				
3 “Notes on Nonlinear Systems” by J.K. Aggarwal, Van Nostrand, 1972.

3. <https://ocw.mit.edu/courses/mathematics/18-03-differential-equations-spring-2010/video-lectures/lecture-31-non-linear-autonomous-systems/>

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Understand the dynamics of basic population models	K2
CO2:	Find approximate solutions of nonlinear equations using averaging and perturbation methods	K3
CO3:	Master the concepts of stability in different perspectives	K4
CO4:	Have an idea on qualitative properties of solutions of linear and nonlinear systems	K2
CO5:	Improve their problem solving capabilities	K3

DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	STATISTICS			
Course Code	21PMTE33	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To develop knowledge on random variables. • To develop knowledge on various standard distributions. • To introduce Sampling Theory. • To familiarize the application through various statistical methods. • To create statistical models for real life problems. 				
Unit: I				18
Set theory, Probability set function, Conditional probability and Independence, Random variables of the discrete type, Random Variables of the continuous type, Properties of the distribution function, Expectation of a Random variable, Some special expectations, Chebyshev's inequality.				
Unit: II				18
Distributions of random variables, Conditional distributions and expectations, The correlation coefficient, Independent random variables, Extension to several random variables.				
Unit: III				18
The Binomial and Related distributions, The Poisson distribution, The Gamma and Chi-square distribution, The Normal distribution, The Bivariate normal distribution.				
Unit: IV				18
Sampling theory, Transformations of variables of the discrete type, Transformations of variables of the continuous type, The Beta, t, F distributions, Extensions of the change of variable technique, The moment generating function technique, Some Specific distributions - The distributions of \bar{X} and $\frac{ns^2}{\sigma^2}$, Expectation of functions of Random Variables.				
Unit: V				18
Convergence of distribution, Convergence of probability, Limiting moment generating functions, the Central limit theorem, Some theorems of limiting distributions.				
Total Lecture Hours				90
Books for Study				
R.V. Hogg and A.T. Craig, Introduction to Mathematical Statistics , Fifth Edition, Pearson Education, New Delhi, 2005.				
Unit I - Chapter 1 : Sections 1.1 to 1.10				
Unit II - Chapter 2 : Sections 2.1 to 2.5				
Unit III - Chapter 3 : Sections 3.1 to 3.5				
Unit IV - Chapter 4 : Sections 4.1 to 4.9				
Unit V - Chapter 5 : Sections 5.1 to 5.5

COURSE OUTCOMES

K Level

On the successful completion of the course , the students will be able to

CO1:	Select the concepts of Probability theory and Mathematical Statistics.	K3
CO2:	Apply properties of Random variables Moments, Characteristic function, Binomial distribution, Poisson distribution, Normal distribution, and Stochastic Convergence.	K3
CO3:	Solve today's complex world problems by applying the concepts obtained in the course	K3
CO4:	Analyse mean, variance, moments for various distributions using Characteristic function, Probability Generating function, One point distribution and Two point distribution	K4
CO5:	Derive various distributions and prove the theorems on Stochastic Convergence	K4

CO & PO Mappings:

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	INTEGRAL EQUATIONS			
Course Code	21PMTE34	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To familiarize the key concept of popular and useful transformations • To solve ordinary differential equations with different forms of initial and boundary conditions. • To understand the relationship between integral and differential equations. • To familiarize Fredholm theory • To apply integral equation in various transformations 				
Unit: I				18
Regularity conditions – Special kinds of Kernels – Eigen values and Eigen functions – Convolution Integral – The Inner or Scalar Product of Two Functions – Reduction to a System of Algebraic Equations – Fredholm Alternatives – An Approximate Method				
Unit: II				18
Method of Successive Approximations – Iterative Scheme – Examples – Volterra Integral Equation – Examples – Some Results about the Resolvent Kernel.				
Unit: III				18
Classical Fredholm Theory – The Method of Solution of Fredholm – Fredholm’s first theorem – examples – Fredholm’s second theorem – Fredholm’s third theorem.				
Unit: IV				18
Applications of ordinary differential equations – initial value problems – boundary value problems – examples – Dirac delta function – Green’s function approach – examples.				
Unit: V				18
Integral transformation methods – introduction – Fourier transform – Laplace transform – application to Volterra integral equations with Convolution type kernels – examples.				
Total Lecture Hours				90
Books for Study:				
Linear Integral Equations: Theory & Technique (Second Ed.) by Ram P. Kanwal, Springer Science & Business Media, 2013.				
Unit 1: Chapter 1 full, chapter 2.1 to 2.5				
Unit 2: Chapter 3 full				
Unit 3: Chapter 4 full				
Unit 4: Chapter 5.1 to 5.6				
Unit 5: Chapter 9.1 to 9.5.				
Books for References:				
1) Raishingania M.D. Integral equation & Boundary value problem , S. Chand publishing, 2007.				
2) Jerri, A. Introduction to integral equations with applications , John Wiley & Sons, 1999.

COURSE OUTCOMES	K Level
On the successful completion of the course , the students will be able to	
CO1:	Explain various types of kernels K4
CO2:	Solve linear Volterra and Fredholm integral equations using appropriate methods K3
CO3:	Formulate complex problems of ordinary and partial differential equations with techniques of Integral transform K4
CO4:	Apply integrals equation in transforms K3
CO5:	Determine a wide range of differential and integral equations by Fourier transforms K4

DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	CRYPTOGRAPHY			
Course Code	21PMTE35	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENEURSHIP	
COURSE OBJECTIVES:				
To learn about Mathematics of Cryptography				
To get the Key ciphers				
To understand the need for the modern stream ciphers				
To know about Data Encryption Standard				
To know about Advanced Encryption Standards				
Unit: I				18
Security goals–Cryptographic attacks –Mathematics of Cryptography: Integer arithmetic–Modular arithmetic–Matrices–Linear congruence.				
Unit: II				18
Traditional symmetric–Key ciphers: Introduction–Substitution ciphers-Transposition ciphers– Stream and block ciphers				
Unit: III				18
Mathematics of symmetric – Key cryptography: Algebraic structures –GF(2n)Fields .Introduction to modern symmetric – Key ciphers: Modern block ciphers – Modern stream ciphers				
Unit: IV				18
Data Encryption Standard (DES): Introduction – DES structure – DES analysis –Security of DES – Multiple DES (Conventional Encryption Algorithms) – Examples of block ciphers influenced by DES				
Unit: V				18
Advanced Encryption Standard (AES) Transformations–Key expansion– The AES Ciphers– Examples– Analysis of AES.				
Total Lecture Hours				90
Books for Study:				
Behrouz Forouzan A and Debdeep Mukhopadhyay, " <i>Cryptography and Network Security</i> " 2013 , 2 nd Edition, McGraw Hill Education (India) Private Limited, New Delhi.

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1	Demonstrate the understanding the fundamentals of cryptography	K2
CO2	Demonstrate standard cryptographic Algorithms used to analyze confidentiality, integrity and authenticity.	K2
CO3	List the security issues in the network, key distribution and management schemes	K4
CO4	Explain in detail about Data encryption standard(DES)Structure	K4
CO5	Analyze the Advanced Encryption standard(AES)	K4

19) b	CO4	K3	
20) a	CO5	K3	
20) b	CO5	K3	
NB: Higher level of performance of the students is to be assessed by attempting higher level of K levels			
Section D (Open Choice)			
Answer Any Three questions			(3x10=30 marks)
Q.No	CO	K Level	Questions
21	CO1	K2	
22	CO2	K2	
23	CO3	K4	
24	CO4	K4	
25	CO5	K4	

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	MATHEMATICAL MODELLING			
Course Code	21PMTE36	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To understand the need for mathematical modelling • To know the modelling in First order Ordinary Differential Equations • To apply the modelling in Second order Ordinary Differential Equations • To know Models for Blood Flows using Fluid Dynamics • To apply Models for Optimal Control of Water Pollution 				
Unit: I				18
Mathematical Modeling: Need, Techniques, Classifications and Simple Illustrations: Simple Situations Requiring Mathematical Modeling - The Technique of Mathematical Modeling - Classification of Mathematical Models - Some Characteristics of Mathematical model Mathematical Modeling Through Ordinary Differential Equations of First Order Mathematical Modeling Through Differential Equations - Linear Growth and Decay Models - Non-Linear Growth and Decay Models - Compartment Models				
Unit: II				18
Mathematical Modeling Through Systems of Ordinary Differential Equations of First Order Mathematical Modeling in Population Dynamics - Mathematical Modeling of Epidemics Through Systems of Ordinary Differential Equations of First Order - Compartment Models Through Systems of Ordinary Differential Equations – Mathematical Modeling in Economics Through Systems of Ordinary Differential Equations of First Order				
Unit: III				18
Mathematical Modeling Through Systems of Ordinary Differential Equations of First Order Mathematical Models in Medicine, Arms Race, Battles and International Trade in Terms of Systems of Ordinary Differential Equations Mathematical Modeling Through Ordinary Differential Equations of Second Order Mathematical Modeling of Planetary Motions - Mathematical Modeling of Circular Motion and Motion of Satellites				
Unit: IV				18
. Some Basic Concepts of Fluid Dynamics - Basic Concepts about Blood, Cardiovascular System and Blood Flows - Steady Non-Newtonian Fluid Flows in Circular Tubes - Basic Equations for Fluid Flow - Flow of Power-law Fluid in Circular Tube - Flow of Herschel-Bulkley Fluid in Circular Tube - Flow of Casson Fluid in Circular Tube – Flow of Immiscible Power-law Fluids in a Circular Tube - Blood Flow through Artery with Mild Stenosis				
Unit: V				18
Water Quality Management Models - Water Quality Management Model 1 – Water Quality Management Model 2 - Water Quality Management Model 3 - Water Quality Management Model 4 - Other Models for Water Quality Management - Other Optimal Pollution Control Models - Optimal Air Pollution Control Models - Control Models for Solid Waste Disposal Noise Pollution Control Model				

		Total Lecture Hours	90

COURSE OUTCOMES			K Level
On the successful completion of the course , the students will be able to			
CO1:	Use differential equations in solving mathematical models.		K3
CO2:	Analyze the Occurrence, classification and characteristics of Mathematical Models.		K4
CO3:	Apply problem solving techniques in Mathematical Modeling to bring solutions to various real life situations.		K3
CO4:	Examine the principles governing the motion of satellites through notions of Mathematical Modeling and interpret the techniques in Mathematical Models to analyse the motion of fluids.		K4
CO5:	Explain suitable models for population dynamics, medicine and reducing various forms of Pollution		K3

FOURTH SEMESTER

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	MEASURE THEORY AND INTEGRATION			
Course Code	21PMTTC41	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To introduce the concepts of measures. • To explain measurable sets and functions. • To learn Riemann and Lebesgue integration. • To analyse the four derivatives and functions • To use Lebesgue theorem in differentiation and integration. 				
Unit: I				18
Measure on the Real line – Lebesgue Outer Measure – Measurable sets-Regularity.				
Unit: II				18
Measurable Functions – Borel and Lebesgue Measurability.				
Unit: III				18
Integration of Non-Negative Functions – The General Integral – Integration of Series.				
Unit: IV				18
Riemann and Lebesgue integrals – The Four Derivatives – Continuous Non – Differentiable Functions.				
Unit: V				18
Functions of Bounded Variations – Lebesgue Differentiation Theorem – Differentiation and Integration – The Lebesgue Set				
Total Lecture Hours				90
Books for Study:				
De Barra. G, Measure Theory and Integration , New Age International Pvt Ltd, Chennai, Reprint,2010.				
Unit I – Chapter 2 Sections 2.1 to2.3				
Unit II – Chapter 2 Sections 2.4 &2.5				
Unit III – Chapter 3 Sections 3.1 to3.3				
Unit IV – Chapter 3 Section3.4 & Chapter4 Sections 4.1 &4.2				
Unit V – Chapter 4 Sections 4.3 to 4.6				
Books for References:

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Explain the concepts of Lebesgue integral.	K4
CO2:	Analyze the geometrical meaning of measurable functions and integrations.	K4
CO3:	Apply the techniques of measure theory to evaluate integrals	K3
CO4:	Compare Riemann with other integrals.	K4
CO5:	Identify four derivatives and Lebesgue differentiation theorem.	K3

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	FUNCTIONAL ANALYSIS			
Course Code	21PMTTC42	L	P	C
Category	Core	6	-	4
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To develop the skills in analyzing the basic structure of Normed spaces. • To use some special classes of functions. • To explain various types of operators. • To understand Banach and Hilbert spaces. • To learn various standard theorems on functional analysis. 				
Unit: I				18
Normed Spaces, Banach Spaces – Further properties of normed spaces – finite dimensional normed spaces and Subspaces - Compactness and Finite Dimension - Linear operators				
Unit: II				18
Bounded and Continuous Linear Operators-Linear Functionals – Linear Operators and Functional on Finite Dimensional Spaces –Normed Spaces of Operators and Dual Spaces - Inner Product Space, Hilbert Space - Further Properties of Inner Product Spaces				
Unit: III				18
Orthogonal Complements and Direct Sums – Orthonormal Sets and Sequences –Series Related to Orthonormal Sets and Sequences – Total Orthonormal Sets and Sequences- Representation of Functional on Hilbert Spaces.				
Unit: IV				18
Hilbert Adjoint Operator - Self Adjoint Operators, Unitary and Normal Operators - Zorn's Lemma - Hahn-Banach Theorem- Hahn-Banach Theorem for Complex Vector Spaces and Normed Spaces - Bounded Linear Functional on $C[A, B]$ and Its Applications.				
Unit: V				18
Adjoint Operator - Reflexive Spaces – Uniform Boundedness Theorem - Strong and Weak Convergence – Convergence of Sequences of Operators and Functional – Open Mapping Theorem - Closed Graph Theorem.				
Total Lecture Hours				90
Books for Study:				
Introductory Functional Analysis with Applications by Erwin Kreyszig , John Wiley & Sons Publication (2006).				
Unit I-	Chapter 2:Sections 2.2-2.6			
Unit II -	Chapter 2: Section 2.7 -2.10			
	Chapter 3: Sections 3.1 - 3.2			
Unit III -	Chapter 3: Sections 3.3 - 3.6 &3.8			
Unit IV-	Chapter 3: Section 3.9 -3.10			
	Chapter 4: Sections 4.1 -4.4			
Unit V -	Chapter 4: Sections 4.5 - 4.9 & 4.12-4.13			
Books for References:

*3 – Advanced Application; 2 – Intermediate Development; 1 - Introductory Level

LESSON PLAN

UNIT	SUBJECT NAME	Hours	Pedagogy
I	Normed Spaces, Banach Spaces – Further properties of normed spaces – finite dimensional normed spaces and Subspaces - Compactness and Finite Dimension - Linear operators	18	Chalk & Talk
II	Bounded and Continuous linear operators-Linear functionals – linear operators and functional on finite dimensional spaces –normed spaces of operators and dual spaces - Inner product space, Hilbert space - Further properties of inner product spaces	18	Chalk & Talk, PPT
III	Orthogonal complements and direct sums – Orthonormal sets and sequences –series related to orthonormal sets and sequences – Total orthonormal sets and sequences- representation of functionals on Hilbert spaces.	18	Chalk & Talk
IV	Hilbert Adjoint operator - Self adjoint operators, unitary and normal operators - Zorn's Lemma - Hahn-Banach Theorem- Hahn-Banach theorem for complex vector spaces and normed spaces - Bounded Linear Functional on $C[a, b]$ and its Applications.	18	Chalk & Talk, PPT
V	Adjoint operator - Reflexive spaces – Uniform boundedness theorem - Strong and weak convergence – Convergence of sequences of operators and functional – Open mapping theorem - Closed graph theorem.	18	Chalk & Talk

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	PROJECT			
Course Code	21PMTPR1	L	P	C
Category	Project	6	-	4
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	

Course Description

The Project is conducted by the following Course Pattern.

Internal

Presentation	}	40
Submission		

External

Project Report	}	60
Viva Voce		

Total - 100

COURSE OUTCOMES		
On the successful completion of the course , the students will be able to		
CO1:	Apply the skill of presentation and communication techniques	K3
CO2:	Motive as an individual or in a team in development of projects.	K4
CO3:	Analyze the available resources and to select most appropriate one	K4
CO4:	Make use of the fundamentals of Mathematics to search the related literature survey	K3
CO5:	Evaluate the real life problems by using Mathematics and its Application.	K5

Course Designed by:

Dr. R. Bhavani Assistant Professor & **Dr. A. Hamari Choudhi**, Head & Associate Professor

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	NUMBER THEORY				
Course Code	21PMTE41	L	P	C	
Category	Elective	6	-	6	
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP		
COURSE OBJECTIVES:					
<ul style="list-style-type: none"> • To know the basic concepts in number theory. • To learn number theoretical functions. • To study Euclid's and division algorithm. • To familiarize about primitive roots. • To understand the fundamental theorem in number theory. 					
Unit: I					18
Well ordering principle, induction , binomial coefficients, Greatest integer function – Divisibility: Notion of divisibility, G. C. D , Euclid's Algorithm, L.C.M, Representations of integers					
Unit: II					18
Primes: Definition, Prime counting function , Prime number theorem ,Test of Primality, Sieve of Eratosthenes, Canonical factorization, Fundamental theorem of Arithmetic.					
Unit: III					18
Congruences : Congruences and Equivalence relations, Linear Congruence, Linear Diophantine equations, Chinese Remainder Theorem, Polynomial Congruences, Modular Arithmetic, Fermat's Theorem, Wilson's Theorem, Pythagorean equation.					
Unit: IV					18
Arithmetic functions: Sigma, Tau functions, Dirichlet product, Dirichlet inverse, Mobius function, Euler's function, Euler's theorem					
Unit: V					18
Primitive roots: Definition, properties, Existence-Quadratic Congruences: Quadratic Residues, Legendre symbols, Gauss lemma, Law of quadratic reciprocity .					
Total Lecture Hours					90
Books for Study:					
Neville Robbins, Beginning of Number Theory , Second Edition, Narosa publications, New Delhi, 2006.					
Unit I- Chapters :1,2					
Unit II - Chapter : 3					
Unit III - Chapter :4					
Unit IV - Chapter :5					
Unit V - Chapter 6: sections 1,2& 3 only.					
Chapter 7: sections 1,2 and 3 only.					
Books for References:					
1. Ivan Niven, Introduction to Theory of numbers , Wiley Eastern,2009.					
2. Tom M. Apostol, Introduction to Analytic Number Theory , Springer InternationalEdition,					

3. Martin Erichson & Anthony Vazzana, “ **Introduction to Number Theory**”,Saurabh printers Private Ltd,2010.

COURSE OUTCOMES

K Level

On the successful completion of the course , the students will be able to

CO1:	Explain the numbering concepts.	K4
CO2:	Apply the concepts of prime numbers and principles to solve problems	K3
CO3:	Solve the system of linear congruencies with different module using the Chinese Remainder Theorem.	K3
CO4:	Categorize the various arithmetic functions	K4
CO5:	Examine the quadratic residues and quadratic non-residues using congruences.	K4

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	DIFFERENTIAL GEOMETRY			
Course Code	21PMTE43	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To study the classical theory of curves and surfaces. • To learn the fundamental existence theorem of space curve. • To know the local intrinsic and local non-intrinsic properties of surfaces. • To deal with the fundamental equations of surface theory. • To learn the applications of Differential Geometry. 				
Unit: I				18
Representation of space curves – Unique parametric representation of a space curve – Arc length – Tangent and osculating plane – Principal normal and binormal – Curvature and Torsion – Behavior of a curve near one of its points – The curvature and torsion of a curve as the intersection of two surfaces – Contact between curves and surfaces – Osculating circle and osculating sphere – Locus of centres of spherical curvature – Tangent surfaces, involutes and evolutes – Bertrand Curves - Spherical indicatrix - Intrinsic equations of space curves - Fundamental existence theorem for space curves - Helices.				
Unit: II				18
Definition of a surface – Nature of points on a surface – Representation of a surface – Curves on surfaces – Tangent plane and surface normal – The general surfaces of revolution – Helicoids – Metric on a surface – The First Fundamental form – Direction coefficients on a surface – Families of curves – Orthogonal trajectories – Double family of curves – Isometric correspondence – Intrinsic properties				
Unit: III				18
Geodesic and their differential equations – Canonical geodesic equations – Geodesics on surfaces of revolution – Normal property of geodesics – Differential equations of geodesics using normal property – Existence theorems – Geodesic parallels – Geodesic polar coordinates – Geodesic curvature – Gauss–Bonnet Theorem – Gaussian curvature – Surfaces of constant curvature.				
Unit: IV				18
The second fundamental form – Classification of points on a surface – Principal curvatures – Lines of curvature – The Dupin indicatrix– Developable surfaces – Developables associated with space curves – Developables associated with curves on surfaces – Minimal surfaces – Ruled surfaces.				
Unit: V				18
Tensor notations – Gauss equations – Weingarten equations – Mainardi-Codazzi equations – Parallel surfaces.				
Total Lecture Hours				90
Books for Study:				
Somasundaram. D., Reprint 2019, Differential Geometry, Narosa Publishing House, Chennai.				
Unit I- Chapters :1(1.1 - 1.18)				
Unit II - Chapter : 2(2.1 - 2.15)				
Unit III - Chapter : 3(3.1 – 3.13)				

Unit IV - Chapter : 4(4.1 – 4.11)
 Unit V - Chapter 5(5.1 – 5.6)

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Demonstrate the Understanding the concept of space curves.	K2
CO2:	Identify metric on a surface, direction coefficients on a surface and nature of points on the surface.	K3
CO3:	Analyze Geodesic and their differential equations	K4
CO4:	List topological aspects of surfaces.	K4
CO5:	Analyse the Weingarton Equations, Gaussian equations, Mainardi-Codazzi equations	K4

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	STOCHASTIC PROCESSES			
Course Code	21PMTE44	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To understand the concepts of Stochastic Process. • To familiarize probability distributions. • To learn queuing models. • To understand the discrete and continuous time Markov chains • To provide solutions in Stochastic Processes Models. 				
Unit: I				18
Stochastic Processes: Some notions – Specification of Stochastic processes – Stationary process – Markov Chains – Definitions and examples – Higher Transition Probabilities				
Unit: II				18
Markov Chains : – Generalization of Independent Bernoulli trails- Sequence of chain – Dependent Trails – Classification of states and chains– Determination of higher transition probabilities – Stability of a Markov System				
Unit: III				18
Graph Theoretic Approach- Markov Chain with Denumerable Number of States- Reducible Chains – Markov Chains with Continuous State Space				
Unit: IV				18
Markov Processes with Discrete State Space : Poisson Processes and their extensions – Poisson process and related distribution – Generalization of Poisson Process – Birth and Death Process- Markov Processes with Discrete State space (Continuous Time Markov Chains)				
Unit: V				18
Stochastic Processes in Queuing – Queuing system – General concepts – the queuing model M/M/1 – Steady state Behaviour – Transient Behaviour of M/M/1 Model – Non Markovian models – Transient Behaviour of M/M/1 Model – Birth and Death Processes in Queueing Theory				
Total Lecture Hours				90
Books for Study:				
Medhi.J, Stochastic Processes , Wiley Eastern, 1987, New Delhi. Reprint 2008				
Unit I-	Chapter 2 : Sections 2.1 to 2.3, Chapter 3 : Sections 3.1 to 3.2			
Unit II -	Chapter 3 : Sections 3.3 to 3.6			
Unit III -	Chapter 3 : Sections 3.7 to 3.11			
Unit IV -	Chapter 4 : sections 4.1 to 4.5			
Unit V -	Chapter 10 : sections 10.1 to 10.4			
Books for References:

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	FLUID DYNAMICS			
Course Code	21PMTE45	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
To learn the physical properties of fluids To relate the principles of continuity, momentum and energy as applied to fluid motions. To know the concept on the Kinematics of fluid motions, To understand three dimensional flows. To know the two dimensional flows				
Unit: I				18
General orthogonal curvilinear coordinates–Arc length in Orthogonal coordinates–Gradient in orthogonal coordinates–Divergence in orthogonal coordinates–Laplacian in orthogonal coordinates – Curl of a vector function in orthogonal coordinates –worked examples –Some cartesian tensor notation.				
Unit: II				18
Real fluids and Ideal fluids – Velocity of a fluid at a point –Streamlines and Path lines, steady and unsteady flows – The velocity potential – The vorticity vector –Local and particle rates of change – The equation of continuity – worked examples – Acceleration of a fluid–Conditions at a rigid boundary.				
Unit: III				18
Pressure at a point in a fluid at rest – Pressure at a point in a moving fluid – Conditions at a boundary of two in viscid Immiscible fluids – Euler’s equations of motion – Bernoulli’s equation – worked examples – discussion of the case of steady motion under conservative body forces– some flows involving axial symmetry – Some special two-dimensional flows–Impulsive motion.				
Unit: IV				18
Some Three-Dimensional flows: Introduction– Sources, Sinks and doublets–Images in rigid infinite plane–Images in solid spheres–Axi-Symmetric flows, Stoke’s Stream function.				
Unit: V				18
Meaning of Two-Dimensional Flow – Use of Cylindrical Polar coordinates – The stream function– The complex potential for Two–Dimensional Irrotational, Incompressible flow–Complex velocity potentials for standard two dimensional flows–Some worked examples –Two-Dimensional image systems–The Milne-Thomson circle theorem.				
Total Lecture Hours				90
Books for Study:				
Frank Chorlton, 2004, Textbook of Fluid Dynamics , CBS Publishers and Distributors Pvt. Ltd. New Delhi				
Unit I-Chapter1(Section 1.19to 1.20)				
Unit II - Chapter2(Section2.1 to2.10)				
Unit III -Chapter3(Section 3.1to3.7, 3.9to 3.11)				
Unit IV -Chapter4(Section4.1 to4.5)				

Unit V - Chapter5(Section5.1 to5.8)

COURSE OUTCOMES	K Level
On the successful completion of the course , the students will be able to	
CO1:	Find the gradient , divergence , curl of orthogonal coordinates K3
CO2:	Identify the Euler’s equations of motion and equations of continuity K3
CO3:	Solve the equations of motion of a fluid when it is at rest and in motion K3
CO4:	Analyze two dimensional and three dimensional flows K4
CO5:	Examine Two–Dimensional flow using cylindrical Polar coordinates K4

CO & PO Mappings:

COS	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6
CO 1	3	3	3	1	1	1
CO 2	3	3	2	2	1	-
CO 3	3	3	3	1	1	1
CO 4	3	3	2	2	1	-
CO 5	3	3	2	2	2	1

*3 – Advanced Application; 2 – Intermediate Development; 1 - Introductory Level

LESSON PLAN

UNIT	SUBJECT NAME	Hours	Pedagogy
I	General orthogonal curvilinear coordinates–Arc length in Orthogonal coordinates–Gradient in orthogonal coordinates–Divergence in orthogonal coordinates–Laplacian in orthogonal coordinates – Curl of a vector function in orthogonal coordinates – worked examples – Some cartesian tensor notation.	18	Chalk & Talk
II	Real fluids and Ideal fluids – Velocity of a fluid at a point – Streamlines and Path lines, steady and unsteady flows – The velocity potential – The vorticity vector –Local and particle rates of change – The equation of continuity – worked examples – Acceleration of a fluid–Conditions at a rigid boundary.	18	Chalk & Talk
III	Pressure at a point in a fluid at rest – Pressure at a point in a moving fluid – Conditions at a boundary of two in viscid Immiscible fluids – Euler’s equations of motion – Bernoulli’s equation – worked examples – discussion of the case of steady motion under conservative body forces– some flows involving axial symmetry – Some special two-dimensional flows–Impulsive motion.	18	Chalk & Talk
IV	Some Three-Dimensional flows: Introduction– Sources, Sinks and doublets–Images in rigid in finite plane–Images in solid spheres–Axi-Symmetric flows, Stoke’s Stream function.	18	Chalk & Talk
V	Meaning of Two-Dimensional Flow – Use of Cylindrical Polar coordinates – The stream function– The complex potential for Two-Dimensional Irrotational, In compressible flow–Complex velocity potentials for standard two dimensional flows–Some worked examples –Two-Dimensional image systems-The Milne- Thomson circle theorem.	18	Chalk & Talk

Course Designed by:

Dr. P. Chitra Devi Assistant Professor & **Dr. S. Andal**, Assistant Professor

**Learning Outcome Based Education & Assessment (LOBE)

MANNAR THIRUMALAI NAICKER COLLEGE (AUTONOMOUS)
DEPARTMENT OF MATHEMATICS
 (For those who joined in 2021-2022 and after)

Course Name	MULTIVARIABLE CALCULUS			
Course Code	21PMTE46	L	P	C
Category	Elective	6	-	6
Nature of course:	EMPLOYABILITY	SKILL ORIENTED	ENTREPRENURSHIP	
COURSE OBJECTIVES:				
<ul style="list-style-type: none"> • To have basic ideas of Sequences, Continuity and Limits • To learn Partial and Total Differentiation • To prove Taylor's theorem and do Chain rule • To know the applications of Partial Differentiation • To solve Multiple Integration 				
Unit: I				18
Sequences in \mathbf{R}^2 – Subsequences and Cauchy sequences – Closure, boundary and interior Continuity – Composition of continuous functions – Characterizations of continuity – Continuity and boundedness – Continuity and monotonicity – Continuity and convexity – Continuity and Intermediate value property - Uniform continuity-- Limits and continuity.				
Unit: II				18
Partial and Directional Derivatives – Partial derivatives – Directional derivatives – Higher-order partial derivatives – Problems				
Unit: III				18
Differentiability – Differentiability and directives – Implicit differentiation – Taylor's theorem and Chain rule – Functions of three variables – Problems				
Unit: IV				18
Absolute extrema – Constrained extrema –Local extrema and saddle points – Linear and quadratic approximations				
Unit: V				18
Double integrals on rectangles – Basic inequality and criterion for integrability – Domain additivity on rectangles - Integrability of monotonic and continuous functions – Algebraic and order properties – Fundamental theorem of calculus – Fubini's theorem on rectangles.				
Total Lecture Hours				90
Books for Study:				
S.R. Ghorpade and B. V. Limaye, "A Course in Multivariable Calculus and Analysis, Springer, 2017.				
UNIT I –Chapter 2 Pages 43 – 52, 55 – 63, 67 – 71				
UNIT II - Chapter 3 Pages 83 – 99				
UNIT III – Chapter 3 Pages 101 – 124, 138 – 156				
UNIT IV – Chapter 4 Pages 157 – 184				
UNIT V – Chapter 5 Pages 185 – 225				
Books for References:				
1. Spivak, Calculus on Manifolds , 5th Edition, CRC Press, 1965.				
2. J. L. Taylor, Foundations of Analysis , American Mathematical Society, 2012.				
3. W. Rudin, Principles of Mathematical Analysis , 3rd Edition, McGraw Hill Book Co., Kogaskusha, 1976.

COURSE OUTCOMES		K Level
On the successful completion of the course , the students will be able to		
CO1:	Apply derivatives of functions of two or more variables	K3
CO2:	Solve the gradient and directional derivatives for a function at a given point.	K3
CO3:	Find the total differential of a function of several variables	K3
CO4:	Solve a function of two or more variables, organizing work into main steps carefully justifying determination of critical points.	K3
CO5:	Analyse multiple integrals either by using iterated integrals or approximation methods.	K4
